# SELECTOR PINS

Magnetic Selector Pins and Knob Detent Pins are often used on fitness equipment and racking systems, but can also be used for many other applications. Magnetic Selector Pins have a rare earth magnet embedded inside of the knob. The magnet holds the pin in place but still allows for easy removal. Knob detent pins have a spring-loaded detent ball, which holds the pin in place. Using adequate force, simply push to insert or pull to remove the pin. Either style of pin can be made with just about any one of our knobs and can be completed with a coiled lanyard to prevent loss. Custom assemblies are available per your specification.

## Magnetic Selector Pins
