# METAL KNOBS

Innovative Components' metal knobs provide the perfect heavy duty solution to your clamping and fastening needs. Metal Knobs are turned from solid bar stock and come in a variety of styles, shapes, and sizes. Metal knobs come equipped with a tapped hole or male stud in either a coarse or fine threads.

Custom designs are available to suit the needs of your application. Our experienced engineering department and state of the art CNC machines allow Innovative to design and manufacture various shapes and sizes of metal knobs.

Popular in the food service and medical industries and often used on fixtures, machine tools, jigs, and assemblies, metal knobs offer added durability and lasting quality. These high end ball knobs provide a seamless appearance/surface and are available with a polished high gloss finish. Metal knobs are available with a thru-hole, blind hole or stud.
