# POP PINS

Pop Pins are used as a convenient and quick way to adjust height or length on many applications. These pins are most commonly used on:

- Fitness Equipment
- Tooling
- Racking Systems

Pins are available with a large assortment plastic knobs including the commonly used ball knob, T-knob, and pull knob. Soft touch knobs are available for a more comfortable grip. Knobs can be made in any color.

Pop Pins have a weld-on steel barrel and a threaded spring-loaded plunger assembly. The pins are available in coarse or fine thread and are also available with a lock-out feature, which holds the pin in the open/retracted position until adjustments are finalized. All pins are case hardened for added durability and strength.

Custom assemblies are available per your specification. Minimums apply.

## Standard Pins Tips:

- 5/16" Straight Tip
- 3/8" Straight Tip
- 1/2" Straight Tip
- 1/2" Short Tip
- 1/2" Tapered Tip
