PLUNGER PINS

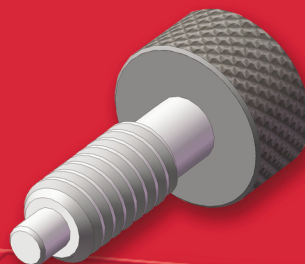

Plunger Pins are spring-loaded devices designed for indexing applications.

Pins are available in styles such as pull-ring, T-handle, lever handle, or knob handle. Pins are tapered for easy alignment and can withstand side loading.

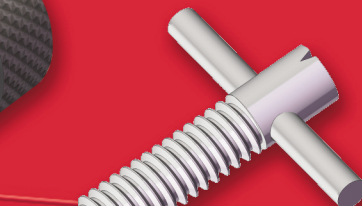

Many styles are available in standard and short lengths as well as locking and non-locking versions. Locking Plungers offer improved functionality that lock out in the open position.

For additional security, add on an anti-vibration locking patch.

Pins are available in Steel or Stainless Steel.
