WIRE ROPE LANYARDS & ASSEMBLIES

Standard & Custom Available

Wire Rope Lanyard assemblies are used to attach quick-release pins and detent pins to a fixture or frame to prevent the pins from being misplaced while they are not in use.

All our wire rope lanyard assemblies are available either uncoated (bare cable) or coated, and made from 7x7 aircraft cable. Wire Rope Lanyards are stocked in both stainless and galvanized wire. Standard lanyards are readily available in both 6" and 12" sizes. Common termination variations such as loops, tabs, and stake eyes are available. Wire Rope Lanyards may be assembled onto Innovative's extensive line of standard Quick Release Pins such as positive locking pins, detent pins, lynch pins, and wire lock pins. Our capabilities also include custom Wire Rope Lanyard Assemblies in various lengths that can contain features such as coiled wire, stop balls, hooks, yokes, and carabiner clips.
